

thereof which extends from the first end of the drawbar, a coupler head formed on a second end of the drawbar, and a cantilever spring formed as an integral part of the drawbar extending from the drawbar adjacent to the coupler head;

a pivotable coupler knuckle secured to the coupler head; and

a magnetically-actuated post which pivotally secures the coupler knuckle to the coupler head, the magnetically-actuated post being pivotally connected to and extending downwardly from the coupler head, the coupler knuckle being in constant contact with the cantilever spring to urge the coupler knuckle to a closed or coupled position, the cantilever spring having a first portion which curves away from the drawbar and a free end which curves back toward the coupler knuckle to apply a tangential force to the coupler knuckle, such that the magnetically-actuated coupler assembly is assembled from three parts.

REMARKS

Claims 2-9 are currently pending in this reissue application, as amended. Claim 1 is cancelled, pursuant to Preliminary Amendment previously filed. Claim 5 has been amended to delete "one of the stops of" and to substitute therefor "at least one stop on." Support for this deletion/substitution is found at column 3, lines 29-43, as well as in Figs. 2 and 7. Claim 9 has been amended to add "assembly" following "coupler" in the last line of the claim (line 15) to properly reflect the terminology used in line 1 of claim 9. Support for this amendment is found at column 3, line 1.

Respectfully submitted,

ROBERT H. STAAT
